

DON'T LET HOUSEHOLD CHEMICALS GO DOWN THE DRAIN

THINK BLUE
MASSACHUSETTS

From cleaning products to paint thinner, what we use inside our homes can end up outside—polluting local streams and rivers. When dumped, spilled, or rinsed into storm drains, these toxic substances flow straight into our waterways. **No treatment. No second chances.**

How to clean up your house and waterways

- ✓ Store chemicals properly—sealed tight and out of the rain.
- ✓ Never pour cleaners, paints, or oils down storm drains or on the ground.
- ✓ Understand what is and what is not safe for septic systems.
- ✓ Understand what is and what is not safe for septic systems.
