

*Rethink Your Yard Care This Spring*

# LAWN CARE & Landscaping

**THINK BLUE**  
MASSACHUSETTS

Spring's here—and so is yard season. Before you reach for the fertilizer, think about your impact on local water. Overwatering, over-fertilizing, and using non-native plants can send pollution into storm drains—and straight into our rivers and streams. The result? Algae blooms, polluted water, and harm to wildlife and drinking water.

## SIMPLE WAYS TO KEEP YOUR YARD GREEN

### Go Native

Local plants use less water and need fewer chemicals.

### Mulch Like a Pro

It locks in moisture and keeps weeds in check.

### Skip the Daily Soak

Water in the early morning, only when your lawn needs it.
