

VEHICLE FLUID LEAKS AND MAINTENANCE

THINK BLUE
MASSACHUSETTS

Leaky cars do more than stain driveways, they drip oil, antifreeze, and other nasty stuff that rain can wash straight into storm drains. From there, it heads right into rivers, ponds, and streams. No filters. No warning. Just pollution.

Keep your car and our water running clean:

- ✓ Check for leaks regularly and fix them fast.
- ✓ Park over a drip pan if needed, and dispose of fluids the right way.
- ✓ Spilled something? Grab some kitty litter or absorbent and clean it up right away.

A well-maintained car = fewer breakdowns, cleaner driveways, and healthier waterways
