RAIN BARREL INSTALLATION & WATER CONSERVATION

SAVE RAIN, SAVE MONEY, SAVE STREAMS

A rain barrel might not look like much, but it's a total game-changer for your yard and your local waterways. By catching rain off your roof, you're not just storing free water for your garden—you're cutting down on runoff that can carry pollutants into storm drains.

Here's why your future self (and the planet) will thank you:

- ▶ Less runoff = less pollution in nearby streams and rivers.
- ▶ Water your plants for free—no hose, no problem.
- ▶ Plants love rainwater. It's chemical-free and naturally soft.

So why not give it a shot? Set one up this spring and let the sky do the watering.
