

DO YOUR “DOODY”

Keep Our Water Clean

Your dog's waste might stay on the ground for a day—but it can linger in our waterways for weeks. When pet waste isn't picked up, rain can wash it into storm drains, carrying harmful bacteria into rivers, lakes, and even swimming spots. That's bad news for fish, wildlife, and your weekend plans.

- Always bag it—at home or on the go
- Toss the bag in a trash bin (not a drain or compost)
- Set the example on walks and in your yard

A single dog can produce nearly a pound of waste per day. That adds up—fast. Pet waste carries more bacteria than human waste and can cause algae blooms that make people (and pets!) sick.
